

THOMAS SCOTT BECK

CHIEF OF STAFF | OPERATIONS

Salt Lake City (Utah native; 30 minutes from Park City) · 801.631.2080 · thomas.beck.ai@gmail.com · linkedin.com/in/thomas-s-beck

Chief of Staff at a seed-stage company, from M&A advisory. Scope expanded four times since March, from bank signatory at week six to the operations function in August. Delivered: the monthly close, the board and investor package, four senior searches, and an audit program from selection to signature.

4 senior hires

closed end to end

25 days to signed offer

founding product manager

168 outside organizations

investors, vendors, banks

10 standing automations

written by the chief executive

EXPERIENCE

TOLKEN Chief of Staff, Operations · Los Angeles (remote from Salt Lake City) March 2026 to present
tolken.co · Cross-border payments. Report to the chief executive. One of three scope owners since August: operations.

FINANCE AND BOARD

- Audited the inherited financial model at the formula level in month one; found and corrected a structural error in the burn forecast before the next board cycle.
- Rebuilt the operating model on a single driver hub, reconciled to closed-book cash, from 116 standards violations to zero. Run the lead investor's quarterly filing and the monthly close with outside accountants.

HIRING AND PEOPLE

- Closed four senior hires end to end: founding product manager, head of European integrations, DevOps, and product design. Helped close a fifth, in legal and risk.
- Founding product manager search: 5,000+ sourced, a 40-person verified slate, first-round interviews, case study, and negotiation. Signed offer 25 days after first contact, against a competing offer.
- Run recruiting with agents: 2,900+ applicants, about 1,700 pre-filtered and 340 tiered by agents, 46 people interviewed across 62 interviews.

LEGAL, RISK AND VENDORS

- Selected, negotiated, and signed the SOC 2 audit program eight days after quote confirmation, with counsel's findings negotiated into the contract first. Type I audit targeted within 90 days.
- Returned priced alternatives at about 40 percent of an insurance proposal within four hours of receipt; corrected a security answer on two live cyber applications before submission; 21 agreements to full signature in 97 days.

OPERATIONS, PRODUCT AND AGENTS

- Took over the design-partner program with written service levels; built launch operations from zero. Two pre-release reviews produced 46 ranked findings, including a critical sign-up flaw caught before any customer saw the build.
- Gave five leaders a personal agent on their own mail, calendar, and records; the chief executive used his on each of its first 54 days.

SCOPE AND SKILLS Eight functions; four countries of employment; equity administration; board and investor reporting; financial modeling; monthly close; vendor selection and contracts; insurance; SOC 2 and audit readiness; KYC and AML vendors; PEO and HRIS; IT, identity, and security; the company decision record (212 dated decisions); Python; SQL; agent deployment and governance.

GREENFIELD NEW VENTURE STUDIO Research and Strategy Intern, Salt Lake City January to March 2024

ROCKMONT PARTNERS Associate Contractor, Salt Lake City September to December 2023

INCENTRUM GROUP Senior Analyst, M&A and Strategic Advisory, New York January 2021 to August 2022

Two-person deal teams with direct client-executive exposure; managed interns and junior analysts. Sole-built a 140+ tab operating model for a \$200M capital raise process. Junior team member on the firm's advisory to Regal on its Reverse Morris Trust with REXNORD.

LEONARD GREEN & PARTNERS Summer Analyst, Private Equity, Los Angeles July to August 2019

ARES MANAGEMENT Summer Rotational Intern, Los Angeles June to August 2018

EDUCATION

UNIVERSITY OF UTAH, DAVID ECCLES SCHOOL OF BUSINESS M.S. Business Analytics January 2024 to December 2025
Full time. Machine learning, causal inference, NLP, SQL, Python. Capstone (lead conversion, two years of CRM data): second in class.

PARK CITY CULINARY INSTITUTE Culinary Arts program October 2022 to January 2023

YALE UNIVERSITY B.A. Economics; Energy Studies August 2016 to May 2020

Three seat, 2018 IRA national champion varsity eight; First Team All-Ivy, 2018. Bow seat, U.S. Under-23 men's four, 2019 World Championships (eighth). Each summer analyst seat started the day after the regatta.

Coursework: Private Equity Investing, Entrepreneurship, Corporate Finance, Accounting, Econometrics.

How the company runs on agents

Built and run by T. Beck as the way the operating work gets done. Figures measured September 2026.

Five leaders each have a personal agent: an assistant that knows their context, prepares their work, and sends nothing without approval. Behind them sit function agents, one per lane. A small leadership team gets the capacity of a much larger one, without added headcount.

WHAT EACH LEADER GOT

	WHAT WAS BUILT	WHAT HAPPENED
Chief executive	A private assistant on hardware he holds, reached from his phone and grounded in company records. It can read company systems and cannot write to them.	Used on each of its first 54 days. He has since written ten standing automations on it himself.
Go to market and finance	A daily brief, a priority push, a Friday close, and a Sunday self-audit, written into his knowledge base. Nothing may be sent outside.	77 consecutive days of automated capture; every scheduled job running clean at the September check.
Legal and compliance	Two isolated workspaces on one machine, proven with planted test phrases. A signed confidentiality clause became a blocking control.	Tested by the leader himself and reported clean; still running seven weeks after handover.
Engineering	An existing assistant rebuilt into five daily jobs, including a morning digest and standup preparation.	Running every day since early September.
Product (new hire)	Two machines from purchase to handover in three days; assistant connected to mail, calendar, and company records before the start date.	Working on day one; by day six, building on the written company standard.

FUNCTION AGENTS, AND WHAT THEY HAVE PRODUCED (THREE SHOWN)

Recruiting Sourcing and scoring run unattended, every source healthy. A person takes every action; no candidate is rejected by a model.	Customer feedback A report to the team every week for 13 straight weeks: 250+ customer calls turned into 1,700+ signals for product.	Pipeline Mirrors every open opportunity daily. Surfaced a report that was hiding nine in ten active opportunities; fixed the same day.
---	--	--

ONE WORKFLOW, START TO FINISH: HIRING

1 WHAT COMES IN Every application lands in one record. Agents pre-filter by rule and tier by fit, and write down the reason for each tier.	2 WHAT A PERSON DOES Reads the shortlist, runs every interview, makes every hiring decision, and approves every message as an exact draft. Agents prepare; they do not decide.	3 WHAT CAME OUT 2,900+ applicants; about 1,700 pre-filtered and 340 tiered by agents; 46 people interviewed across 62 interviews. Measured from the recruiting database.
THE RULE Agents read and prepare freely. Anything that leaves the company waits for a person to approve the exact draft; if the draft changes, the approval is gone. Done means checked in the live system, not taken from an agent's own report.		

HOW IT IS KEPT TRUSTWORTHY

- **Less access than the person served:** the chief of staff's messages to the chief executive's assistant are handled as another party's, with no tools and no write access, proven on a ten-case privacy test.
- **Review before release:** three consecutive internal releases were stopped on an independent review while their own tests were passing.
- **Someone is on call:** after an overnight failure the chief executive's assistant was back with its full history in nine hours. Executive machines now carry independent monitoring.
- **Providers certified:** ten AI and data providers checked against a training and retention standard from their published terms; one that trains on customer data by default was blocked.

Scope: internal operating tools. Customer-facing systems, and anything that needs engineering-grade reliability, sit with engineering by design; a tool that reaches that bar is handed over.

At a company that builds agents: operations run on the company's product first, and nothing is built in engineering's lane.

Footprint: open-source agent runtime; models from every major provider; open-weight models on-device for sensitive work. **Full record, with sources:** thomasbeck.ai/record/23rjkckc/ **The machine room, drawn:** thomasbeck.ai/record/23rjkckc/machine/
